

A new way to make a profitable investment

Lite Paper(version1.2) Spring 2022

Abstract

With the growth of the blockchain-based asset ecosystem, the program recognizes the need for external support from the blockchain community to mitigate the impact of supply/demand on fluctuations of digital currencies and further grow of stability of the digital currency market.

With over 50 industries and high returns, the Iranian stock market is one of the prospective investment markets, which explains why it has a low correlation with global markets. It is an appealing alternative for international investors seeking a profitable and secure investment.

Tehran Exchange Token, or TEX Token for brief, works as a derivative token in line with being a bridge between the Iranian stock market and the cryptocurrency market, allowing investors to participate in this market via a token backed by an Iranian stock market fund.

Definition (Executive Summary)

Iran is the world's fifth-richest country in natural resources (oil, gas, mineral reserves, nature reserves, etc.). The country's massive size (17th in the world), population, workforce, and geographic location have produced a favorable environment for the growth of industries and businesses. Furthermore, US and European Union sanctions and Iran's self-sufficiency strategy have led to the country's massive industrial development. Iran's \$ 190 billion stock exchange reflects the country's industry, capabilities, and potential. The return of 15,500 percent on the Iran Stock Exchange's overall index over the previous two decades demonstrates the market's significant profitability and return. Tex Token has provided a token backed by an ETF of the index stocks of the Iranian stock market, which a group of experts and analysts manages.

All TEX Token procedures, summarized in the system architecture section, are automated and based on accurate figures from the Iran Stock Exchange Organization and the Central Bank of Iran. Due to its supporting material, TEX Token possesses features of both markets, guaranteeing its stability and independence from Altcoins and Bitcoins.

Platform Overview

The TEX-Token investing platform allows financial institutions and individuals to benefit from markets that would otherwise be out of reach.

TEX-Token focuses on exchanging conventional cryptocurrencies obtained with foreign fiat money or old currencies for this national cryptocurrency.

System Architecture

As a derivative token, TEX Token has an automatic pricing mechanism based on the backing fund, which is based on TEX analysts' report on the portfolio investment structure in the management dashboard. The current price of the TEX Token is calculated using the official price of Iranian exchange offices for the dollar/rial exchange rate and the current price of each of the fund's shares using the TSE value. It should be mentioned that the Iranian capital market is accessible on Iranian working days - Saturday to Wednesday - during office hours; the dollar/rial ratio in Iran will fluctuate based on changes in stock prices and other times depending on fluctuations.

Two pillars support the economics and function of TEX:

1-Token

A token symbolizes the supporting exchange fund's NAV on the Atrium network platform and allows for asset trade and transfer on the blockchain

platform. This token, called governance token, will be able to decentralize the fund management process, TEX Token investment, and system decisions in future versions.

2. Platform for trading

The Tex trading platform or dashboard acts as a primary market, stabilizing (pegging) the price of tex tokens at a nominal fee (NAV) and allowing investors to manage their assets at any moment for a bit of cost. Tokens can be bought and sold.

Value Proposition

Tex Token is not only a competitor to investable assets and digital currencies, but it can also be used in conjunction with a successful investment. Its support (the Iranian stock market) is highly profitable in the medium and long term and is not associated with global markets. As a result, by allocating a portion of the portfolio to TEX Tokens, the portfolio risk can be mitigated to a large amount. The profitability and efficiency of Tex Token and the portfolio stability capability set it apart from other stable pricing.

Tokenomi

All available tokens will be backed up for a certain amount of NAV fund and mined per customer. There are no tokens on a premium basis, and no passes will be awarded to Tex Token teams and investors. Tex Teams are only allowed to place tokens instead of entering the number of tickets in the basket to market and maintain network stability. Backup, repurchase, document, remove up to 3% of the total amount stored in the blockage in the backup without minting or burning the token.

The amount entered or withdrawn to the fund will not necessarily be from direct sources of the token tax. The Tex investment portfolio is transparently monitored in the Tech dashboard, and all financial matters, including tether deposits instead of buying or selling tax tokens, investments, per transaction, tax token fees, and the stock exchange organization (brokerage fee), are The course will be audited by reputable companies and made available to all stakeholders.

Disclaimer

Director's Responsibility Statement The Directors of TEX-Token Project have issued this document, whitepaper, and associated documents and have taken all reasonable care to ensure that the facts stated in this document are true and accurate in all material respects and that there are no other facts the omission of which would make misleading any statement in the paper, whether of facts or opinion. The Directors accept responsibility accordingly. This document states the Company's current views concerning the TEX-Token project and related matters. From time to time, the Company may revise this document, the TEX-Token Documents, and White Paper without notice. The Information entered in this document, the TEX Token Documents, and White Paper is indicative only and is not legally binding on the Company or any other party. This document is for informational purposes only and does not constitute and is not intended to be an offer to sell, a solicitation of an offer to buy, or a recommendation of the Company, an investment in the TEX-Token project or any other similar projects or property of the Company, or shares or other securities in the Company or any affiliated or associated company in any jurisdiction. At the same time, we make every reasonable effort to ensure that all available information is accurate and up to date; such material in no way constitutes professional advice. Individuals intending to participate in the Token purchases (Minting), Token sales (Burning), or NAV price calculation

processes should seek independent professional advice before acting on any available Information. The Company does not recommend purchasing Tokens for speculative investment purposes. Tokens do not entitle you to any governance, voting, or similar right or entitlement in the Company or its affiliated companies. Tokens are sold as digital assets, similar to downloadable software, digital music, etc. The Company does not recommend that you purchase Tokens unless you have prior experience with cryptographic tokens, blockchain-based software, and distributed ledger technology and unless you have taken independent professional advice.
